

Omya UK - a leading manufacturer of elastomer bound chemical dispersions >>

MULTISPERSE® is the name of the well known range of elastomer bound chemical dispersions produced by Omya UK at its Humber UK factory.

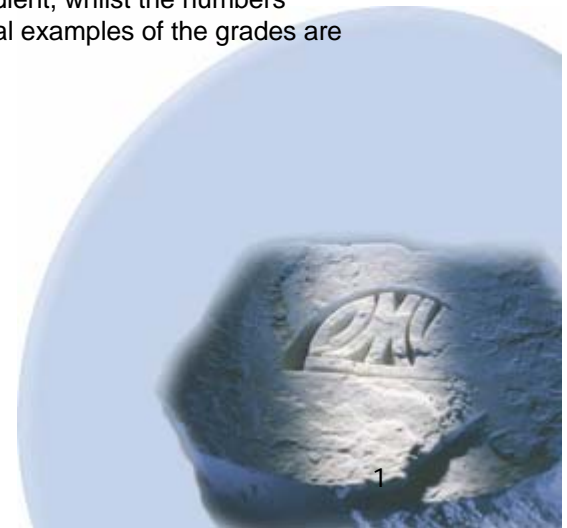

The **MULTISPERSE®** grade identification follows a well established practice with the grade number giving information on the binder system used, the active ingredient, the percentage concentration and the physical form.

The first letter of the grade provides the binder type, the middle section identifies the active ingredient, whilst the numbers define the active ingredient concentration and the suffix letter describes the physical form. Typical examples of the grades are as follows:

EDITION: 27.02.2006

MULTISPERSE® Products

The following table describes the main binder types and physical forms currently used (other binders could be available on request) :

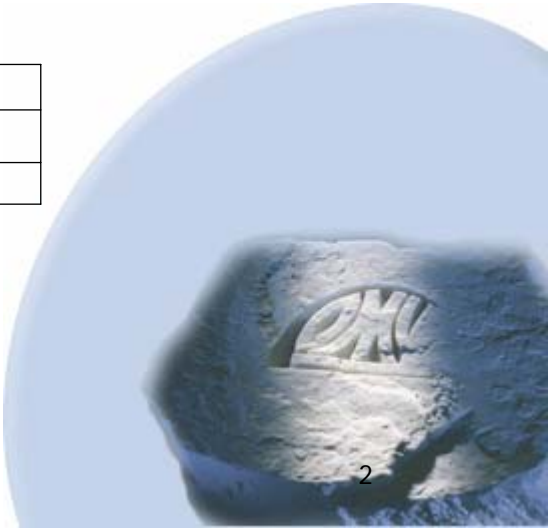

BINDER TYPES		
A = Acrylonitrile Butadiene (NBR)	E= Ethylene propylene	K = Chlorinated polyethylene
P = PolyisobutyleneR	R= Polyisoprene	S= Styrene butadiene

PHYSICAL FORMS		
No letter = Standard slab	R = Roller quality slab	P = Pellet form
